

Access Control

By Invitation Only!

Restricting access/entry to our home or business has always been an important factor in the fight against crime, however with economic and international tension at a high, it is even more important to become more security conscious. It is essential that employees and their possessions are protected in the workplace and that a company's property both intellectual and physical is safeguarded from theft, vandalism and the possibility of industrial espionage.

Access control is, quite simply, a means of managing the access of people and vehicles, where appropriate, to buildings, car parks, and vulnerable or sensitive

Controlling the entry to buildings, blocks of flats and single domestic residences, either with or without video surveillance, can provide a real sense of security and peace of mind.

Correctly designed, installed and operated, a good access control system should provide a balance between security needs and freedom of movement for authorised personnel. Electronic access control is easy to understand and may consist of remote locking / unlocking devices fitted to doors, gates, barriers or lifts. They may be operated by means of card, code or token readers as well as the increasingly popular biometrics systems, such as palm, finger or eye recognition readers.

At @lphasec we have the experience and expertise to provide a solution to any problem and to design, install and maintain the most appropriate system for any given situation.

From simple single door to complex 'on-line' computer based systems covering hundreds of doors or access points. From single door intercoms to high rise blocks of flats with multi-door video entry phone or concierge systems
